mohbot.github.io/researchProfile/

Summary: Computational Biologist with more than 10 years of **Data Science and Machine Learning** experience in **Bioinformatics and Health-Informatics** applications.

Education

- **University of South Florida** **Tampa, FL, USA**
Ph.D. in Cell and Molecular Biology (Computational Biology) *July 2017*
- **Isfahan University of Technology** **Isfahan, Iran**
B.Sc. in Materials Science and Engineering *Sep 2008*

Work Experiences

- **M2GEN-Moffitt Cancer Center.** **Tampa, FL, USA**
Bioinformatics Staff Scientist *April 2018 – Present*
Developing scalable pipelines for NGS upstream and downstream data analysis (RNAseq and Whole Exome Sequencing (WES))
 - Biomarker development (on immuno-oncology cohorts) including gene expression, copy number, Internal Tandem Duplication (IDT), Microsatellite Instability (MSI) and Tumor Mutation Burden (TMB) analysis
 - Pan-cancer tissue of origin classification with machine learning, deep learning methods (using gene expression, copy number and mutation data)
 - Pipeline development for CNV, LOH, tumor sub-colonality, purity and ploidy estimation
 - RNAseq tumor purity estimation (based on Single-cell RNA seq)
 - Multi-omics analysis for downstream analysis as well as QC control considering effect of latent variables such as cancer types, preservation methods and batch effects
 - Automated QC pipeline development via integration of database with DNAnexus' API in the cloud to create QC reports of WES and RNAseq
- **WellCare Health Plans, Inc.** **Tampa, FL, USA**
Data Scientist *Jan 2018 – April 2018*
 - Developed customer retention model using machine learning methods (Gradient boosting, Logistic regression and Random forest.)
 - Developed all-cause mortality models based on members' age, gender and common laboratory tests by machine learning methods (Gradient boosting, Random forest, Logistic regression)
- **Moffitt Cancer Center-Internship** **Tampa, FL, USA**
Bioinformatics Scientist Intern *Aug 2017 – Jan 2018*
 - Pipeline development for detecting cancer-associated germline mutations (TCGA WES raw data)
- **University of South Florida-Ph.D.** **Tampa, FL, USA**
Ph.D. Student and Graduate Researcher *Aug. 2012 – Aug 2017*
 - Developing mathematical and computational models using machine learning and graph theory methods to elucidate dynamic allostery in proteins
 - Investigating the effect of different MD force fields on simulating the D-band Length of type I collagen
- **Mobarakeh Steel Company** **Isfahan, Iran**
Data Analyst *Aug 2008 – Aug 2010*
 - Developed machine learning models to predict mechanical properties of steel products

Technical and Personal skills

- **Programming Languages:** Python, R, C++, C#, MATLAB, SQL, Bash scripting, Cloud-app development, Docker and Version Control
- **Libraries:** Python (Numpy, Pandas, scikit-learn, H2O, PySpark, PyTorch, Keras, TensorFlow, Scipy, StatsModels, Jupyter, seaborn), R (pamr, limma, fgsea, sva, tidyverse), MATLAB (neural networks, genetic algorithm and optimization, bioinformatics, parallel computing, symbolic math, curve Fitting)
- **Bioinformatics:** Biopython, bioconductor, bowtie2, Pysam, samtools, BCFtools, bedtools, maftools bcbio-nextgen (bwa, freebayes, GATK), Sentieon, CNVKit, TitanCNA, STAR, STAR-Fusion, RSEM, ESTIMATE, DNAnexus, GDC, UCSC genome browser, IGV, cbiportal
- **Computational Biology:** Gromacs, LAMMPS, Pdynamo, AutoDock, Schrödinger, CAChe, Moldock, Modeller and Materials Explorer
